

Submitted to Future Grant Support for Forestry
Submitted on 2023-05-17 08:38:36

Ministerial Foreword - Forestry in Scotland is a sector that we can be justly proud of.

1 - Introduction and Rationale for Providing Grant Support for Forestry

1. Do you agree that grant support for forestry should continue to be improved and developed as a discrete scheme within the overall package of land support?

Not Answered

Please explain your answer in the text box.:

2. Are there any changes that would allow for better complementarity between the forestry and agriculture funding options?

Not Answered

Please explain your answer in the text box.:

2 - Forests Delivering for Scotland's Climate Change Plan

3. How can the support package for forestry evolve to help tackle the climate emergency, to achieve net zero, and to ensure that our woodlands and forests are resilient to the future climate?

Please explain your answer in the text box.:

4. Private investment through natural capital and carbon schemes can make a valuable contribution to climate change. Do you agree that the grant support mechanism should have more flexibility to maximise the opportunities to blend private and public finance to support woodland creation,

Not Answered

Please explain your answer in the text box.:

5. How could the current funding package be improved to stimulate woodland expansion and better management across a wide range of woodland types, including native and productive woodlands?

Please explain your answer in the text box.:

6. Do you agree that it should be a requirement of grant support that woodlands are managed to ensure that they become more resilient to the impacts of climate change and pests and disease?

Not Answered

How can the grant scheme support this?:

3 - Integrating Woodlands on Farms and Crofts

7. Which of the following measures would help reduce the barriers for crofters and farmers wanting to include woodland as part of their farming business? Please select all that apply.

Better integration of support for woodland creation with farm support mechanisms, Knowing where to get reliable advice, Clearer guidance on grant options, Flexibility within options, Intervention level, Support with cashflow, Information on how current land use could continue with trees integrated throughout

Are there others not listed above?:

In our experience of working with our tenant farmers on proposals for tree planting, tenants can be hesitant due to uncertainty on how arrangements will work in practice with ambiguity around matters such as how payments for carbon credits should be split between the farmer and the landlord or who has the liability for the trees/credits. More generally tenants can be reluctant to take on the risk of tree planting with concerns over how tree planting schemes might impact on farm viability. Clear advice would be particularly useful addressing these sort of issues as would case studies and examples of where carbon credits and tree planting on farms has worked and demonstrated successful diversification and supported agricultural productivity.

It will be important that the FGS is able to support a range of tree planting from large woodlands to small copses, hedgerows and shelterbelts, and riparian planting .

Landlords/managers are integral, with a supportive landlord being key to successful tree planting on farms.

We support the need to engage with local communities for larger schemes to ensure multi purpose outcomes.

Land managers may retain sporting rights over land to be planted and proposals should look to balance these rights with the need for the planting of new trees. This may be a consideration for the support provided by FGS.

We would hope that changes to the FGS will be positive and make things simpler for tenants/land manager while retaining necessary safeguards. We are aware that there is cross-linkage with the other legislative changes underway on e.g. new land use tenancies and the Agriculture Bill. It is important that these new pieces of legislation are appropriately drafted to work together.

8. Establishing small woodlands can have higher costs. What specific mechanisms would better support small scale woodlands and woodland ownership?

Please explain your answer in the text box.:

4 - Forests Delivering for People and Communities

9. How can forestry grants better support an increase in easily accessible, sustainably managed woodlands in urban and peri-urban areas?

Please explain your answer in the text box.:

10. How can grant support for forestry better enable rural communities to realise greater benefits from woodland to support community wealth building?

Please explain your answer in the text box.:

11. How can the forest regulatory and grant processes evolve to provide greater opportunities for communities to be involved in the development of forestry proposals?

Please explain your answer in the text box.:

12. How can the forestry regulatory and grant processes evolve to ensure that there is greater transparency about proposals and the decisions that have been made on them?

Please explain your answer in the text box.:

13. Forestry grants have been used to stimulate rural forestry businesses by providing support with capital costs. Do you agree that this has been an effective measure to stimulate rural business?

Not Answered

a. How could this approach be used to support further forestry businesses?:

b. How could this approach be used to support further skills development?:

14. How could the FGS processes and rules be developed to encourage more companies and organisations to provide training positions within the forestry sector?

Please explain your answer in the text box.:

5 - Forests Delivering for Biodiversity and the Environment

15. The primary purpose of FGS is to encourage forestry expansion and sustainable forest management, of which a key benefit is the realisation of environmental benefits. How can future grant support better help to address biodiversity loss in Scotland including the regeneration and expansion of native woodlands?

Please explain your answer in the text box.:

16. Herbivore browsing and damage can have a significant impact on biodiversity loss and restrict regeneration. How could forestry grant support mechanisms evolve to ensure effective management of deer populations at:

Landscape scale?:

Small scale mixed land use?:
